NOT ALL DOGS ARE ALIKE

These feeding guidelines are only a starting point. Some dogs may have lower food requirements due to metabolism or lower activity levels. Other breeds may be more active and require higher food amounts. Watch your pets weight and overall health and adjust accordingly. No ribs showing. No round dogs. Should have a waist.

We suggest feeding twice a day, half the daily feeding allowance in the morning and half in the evening. Do not mix kibble and raw food. If you must feed kibble, only feed raw in the morning and kibble at night or vice versa.

For puppies start with 4-8% of current weight. Feed 3-6 times a day. Weigh your dog each week and adjust food amounts depending on weight gain or weight loss. Too much food too fast may cause loose stools. Be patient. Be aware. Be diligent.
